MENDELSON & ASSOCIATES, P.C. 1500 JOHN F. KENNEDY BLVD., SUITE 405 PHILADELPHIA, PA 19102			EXAMINER NGUYEN, KHAI MINH	
			ART UNIT	PAPER NUMBER
			2687	

DATE MAILED: 06/30/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/777,889	Applicant(s) CANNON ET AL.	
	Examiner Khai M Nguyen	Art Unit 2687	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 14 March 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1,2,5-14,19-22,28 and 29 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-2,5-14,19-22,28-29 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Amendment

1. This Office Action is response to Amendment filed on 3/14/2005
Claims 1-2, 5-14, 19-22 and 28-29 are pending.

Response to Arguments

2. Applicant's arguments with respect to claims 1-2, 5-14, 19-22 and 28-29 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims **6, 9, 12** are rejected under 35 U.S.C. 102(b) as being anticipated by Murata et al. (U.S. Pat-4962524).

Regarding claim 6, Murata teaches a cordless telephone system (fig.1) comprising:

a base station including first control circuitry for controlling operations at said base station (fig.1, element 3, col.2, lines 26-51, col.3, lines 40-54); and

at least two cordless telephone handsets for communicating with said base station (fig.1, abstract, col.2, lines 26-51), each including second control circuitry for controlling operations at said handset (fig.1, col.3, line 40 to col.4, line 11);

said first and second control circuitry operating in response to initiation of an intercom communication at one of said base station and handset to place an active call at least one of said base station and handset on hold during said intercom communication (fig.1, col.2, line 52 to col.3, line 19).

Regarding claim 9, Murata teaches a cordless telephone system (fig.1) comprising;

a base station including first control circuitry for controlling operations at said base station (fig.1, element 3, col.2, lines 26-51, col.3, lines 40-54); and

at least a first and second cordless telephone handsets for communicating with said base station including second (fig.1, abstract, col.2, lines 26-51) and third control circuitry for controlling operations at said first and second handsets respectively (fig.1, col.2, line 52 to col.3, line 7);

said first, second and third control circuitry operating in response to initiation of an intercom communication at said base station or one of said first and second handsets to place an active call on hold during said intercom communication (fig.1, col.2, line 52 to col.3, line 19).

Regarding claim 12, Murata teaches a cordless telephone system (fig.1) comprising:

a base station including first control circuitry for controlling operations at said base station (fig.1, element 3, col.2, lines 26-51, col.3, lines 40-54) and separate intercom buttons for each of a plurality of cordless telephone handsets said plurality of cordless telephone handsets (fig.1, element 1-9, 2-9) comprising at least a first and second cordless telephone handsets for communicating with said base station including second and third control circuitry for controlling operations at said first and second handsets respectively (fig.1, col.2, lines 52 to col.3, line 7) and a separate intercom button for said base station and each other of said handsets (fig.1, element 1-9, 2-9, 3-9, col.3, lines 40-54);

said first, second and third control circuitry operating in response to initiation of an intercom communication at one of said base station and said first and second handsets to place an active call on hold during said intercom communication (fig.1, col.2, line 52 to col.3, line 19).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims **1-2, 19-22** are rejected under 35 U.S.C. 103(a) as being unpatentable over Tsukada et al. (U.S. Pat-4650931) in view of Murata et al. (U.S. Pat-4962524).

Regarding claim 1, Tsukada teaches a method of answering an incoming call at a cordless telephone having a base unit and a of handsets (fig.1, element 1, 2, col.4, lines 27-53), each of said base unit and of handsets being at a different location (col.1, lines 23-48), the method comprising the steps of:

initiating an intercom connection (fig.4), by an intercom initiating party to alert an intercom receiving party (fig.4, col.2, line 65 to col.3, line 35, col.13, lines 51-59);

automatically placing said incoming call in a hold status if either said intercom initiating party or said intercom receiving party is also said answering party (abstract, col.2, lines 47-53); and accepting said incoming call (col.2, lines 47-53), by said intercom receiving party (col.2, lines 47-53), by terminating the hold status (fig.3, col.5, line 66 to col.6, line 29).

Tsukada fails to specifically disclose a method of answering an incoming call at a cordless telephone having a base unit and a plurality of handsets, each of said base unit and plurality of handsets being at a different location, answering by a first party the incoming call at one of said base unit and said plurality of handsets. However, Murata teaches a method of answering an incoming call at a cordless telephone having a base unit and a plurality of handsets (fig.1, abstract, col.2, line 52 to col.3, line 7), each of said base unit and plurality of handsets being at a different location (fig.1, 4a-5c, element 1,2, col.5, line 45 to col.6, line 22), answering by a first party the incoming call

at one of said base unit and said plurality of handsets (fig.1, abstract, col.2, line 52 to col.3, line 7). Therefore, it would have been obvious to one of ordinary skill in the art at the time invention was made to use a method of answering an incoming call at a cordless telephone having a base unit and a plurality of handsets, each of said base unit and plurality of handsets being at a different location, answering by a first party the incoming call at one of said base unit and said plurality of handsets as taught by Murata with Tsukada teaching in order to transfer an incoming call to more than one handsets, in other rooms/location without dropping the call.

Regarding claim 2, Tsukada and Murata further teaches the method of claim 1, further comprising:

accepting said incoming call (see Murata, col.4, line 53 to col.5, line 7), by said answering party, by terminating the-hold status (col.14, line 63 to col.15, line 33).

Regarding claim 19, Tsukada and Murata further teaches a method as in claim 1, wherein said step of initiating an intercom connection comprises activating an intercom initiator (col.14, line 63 to col.15, line 33).

Regarding claim 20, Tsukada and Murata further teaches a method as in claim 1, wherein said step of alerting a further comprises sending an intercom connection request signal (col.2, line 65 to col.3, line 34, see Murata, fig.1, 4a-5c, element 1,2, col.5, line 45 to col.6, line 22).

Regarding claim 21, Tsukada and Murata further teaches a method as in claim 1, further comprising terminating said step of initiating by sending an end intercom signal (col.12, line 64 to col.13, line 40).

Regarding claim 22, Tsukada and Murata further teaches a method as in claim 21, wherein said step of sending an end intercom signal further comprises activating an intercom control (col.12, line 64 to col.13, line 40).

Claims **5, 7-8, 10-11, 13-14, 28-29** are rejected under 35 U.S.C. 103(a) as being unpatentable over Murata (U.S. Pat-4962524) in view of Tsukada et al. (U.S. Pat-4650931).

Regarding claim 5, Murata teaches a method of answering an incoming call at a cordless telephone with a base unit and at least a first handset and a second handset (fig.1, element 1,2, col.2, line 52 to col.3, line 7), said base unit and said at least first and second handsets being at separate locations (fig.1, col.4, lines 52 to col.5, line 7), the method comprising the steps of:

a first party answering the incoming call at a first handset of the cordless telephone (fig.1, 4a-5c, col.5, line 45 to col.6, line 22);

the first party alerting a second party by initiating an intercom connection between said first handset and said second handset (col.5, line 45 to col.6, line 33).

Murata fails to specifically disclose while the incoming call is automatically placed in a hold status, and the second party accepting the incoming call at the handset by terminating the hold status. However, Tsukada teaches while the incoming call is automatically placed in a hold status (fig.3, abstract, col.5, line 66 to col.6, line 29) and the second party accepting the incoming call at the handset by terminating the hold status (col.8, lines 25-50). Therefore, it would have been obvious to one of ordinary skill in the art at the time invention was made to use while the incoming call is automatically placed in a hold status, and the second party accepting the incoming call at the handset by terminating the hold status as taught by Murata with Tsukada teaching in order to provide a cordless telephone in which either one of the handset and base units may receive an incoming telephone call which appears when the telephone is in the intercom mode.

Regarding claim 28, Murata and Tsukada further teaches a method as in claim 5, wherein said step of alerting a second party further comprises sending an intercom connection request signal from said first handset to at least said second handset (col.2, line 65 to col.3, line 34, see Murata col.9, lines 14-21).

Regarding claim 29, Murata and Tsukada further teaches a method as in claim 5, further comprising terminating said step of initiating an intercom connection between said first handset and said second handset by activating an intercom control on said first handset (col.2, line 65 to col.3, line 34, see Murata col.9, lines 14-21).

Regarding claim 7, Murata teaches the system as in claim 6,

Murata fails to specifically disclose the first control circuitry, causes said active call to be placed on hold when said intercom communication is initiated during said active call and initiates said intercom communication between said base station and said handsets. However, Tsukada teaches the first control circuitry (fig.3, element 240) causes said active call to be placed on hold when said intercom communication is initiated during said active call (col.8, lines 51-61) and initiates said intercom communication between said base station and said handsets (fig.4, col.13, lines 51-59). Therefore, it would have been obvious to one of ordinary skill in the art at the time invention was made to use the first control circuitry causes said active call to be placed on hold when said intercom communication is initiated during said active call and initiates said intercom communication between said base station and said handsets as taught by Murata with Tsukada teaching in order to provide a cordless telephone in which either one of the handset and base units may receive an incoming telephone call which appears when the telephone is in the intercom mode.

Regarding claim 8, Murata and Tsukada further teaches the system as in claim 7, wherein said first control circuitry causes said active call to be re-engaged when said base station or said handsets terminates said intercom communications (fig.3-4, col.8, lines 51-61, col.13, lines 51-59).

Art Unit: 2687

Regarding claim 10, Murata teaches the system as in claim 9,

Murata fails to specifically disclose the first control circuitry, causes said active call to be placed on hold when said intercom communication is initiated during said active call and initiates said intercom communication between said base station and said handsets. However, Tsukada teaches the first control circuitry (fig.3, element 240) causes said active call to be placed on hold when said intercom communication is initiated during said active call (col.8, lines 51-61) and initiates said intercom communication between said base station and said handsets (fig.4, col.13, lines 51-59). Therefore, it would have been obvious to one of ordinary skill in the art at the time invention was made to use the first control circuitry causes said active call to be placed on hold when said intercom communication is initiated during said active call and initiates said intercom communication between said base station and said handsets as taught by Murata with Tsukada teaching in order to provide a cordless telephone in which either one of the handset and base units may receive an incoming telephone call which appears when the telephone is in the intercom mode.

Regarding claim 11, Murata and Tsukada further teaches the system as in claim 10, wherein said first control circuitry causes said active call to be re-engaged when said base station or one of said at least a first and second handsets terminates said intercom communication (fig.3-4, col8, lines 51-61, col.13, lines 51-59).

Regarding claim 13, Murata teaches the system as in claim 12,

Murata fails to specifically disclose the first control circuitry, causes said active call to be placed on hold when said intercom communication is initiated during said active call and initiates said intercom communication between said base station and said handsets. However, Tsukada teaches the first control circuitry (fig.3, element 240) causes said active call to be placed on hold when said intercom communication is initiated during said active call (col.8, lines 51-61) and initiates said intercom communication between said base station and said handsets (fig.4, col.13, lines 51-59). Therefore, it would have been obvious to one of ordinary skill in the art at the time invention was made to use the first control circuitry causes said active call to be placed on hold when said intercom communication is initiated during said active call and initiates said intercom communication between said base station and said handsets as taught by Murata with Tsukada teaching in order to provide a cordless telephone in which either one of the handset and base units may receive an incoming telephone call which appears when the telephone is in the intercom mode.

Regarding claim 14, Murata and Tsukada further teaches the system as in claim 13, wherein said first control circuitry causes said active call to be re-engaged when said base station or one of said at least a first and second handsets terminates said intercom communications (fig.3-4, col.8, lines 51-61, col.13, lines 51-59).

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Khai M Nguyen whose telephone number is 571.272.7923. The examiner can normally be reached on 8:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lester Kincaid can be reached on 571.272.7922. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
